GUEST PAGING
Starting Sets

New, Innovative, Unique
The world's first Color Paging

Whether in the fast-casual area, the food court or at the kiosk
- with LRS's Color Paging, you can efficiently direct your guests from
a central ordering point to the correct pickup stations.
This reduces confusion, optimizes processes, and improves
the entire guest experience.

In combination with our RX-CS8 pager
you can now define which LED color you want to
use for customer notification
- simply at the touch of a button.
Whether red, green, blue, or another color:
With the color-coded LED ring, you can signal to
your guests at a glance where their orders
are ready for pickup.

HOW IT WORKS:

1 Arrive
The guest is arriving.

2 Order
The guest is ordering at the counter.

3 Pay
The guest is paying their order.

4 Assign
Your guest will receive a pager that
is assigned to your system.

5 Notify
The order is ready - the pager
notifies the guest with a color
selected on the transmitter.

6 Responses
The guest exchanges their pager for
their completed order.
